

### Defibtech Lifeline AEDs

- ♥ Unprecedented ease-of-use
- 🔗 Robust and durable
- 🔧 Easy maintenance

# Peace of Mind for All Aboard

## With a Defibtech AED on board, help is always within reach.

In remote locations, such as a cruise ship or commercial vessel, an ambulance is not on its way to assist, nor is there a hospital near by. AEDs are the only treatment available for passengers or crew members that are victims of sudden cardiac arrest. In challenging environments, an AED provides rescuers with the knowledge and confidence they need to help save a life.

**Full-Color Interactive Video Display**

- Increased ease-of-use for lay responders.
- Visual prompts walk the responder through pad application and CPR.
- Audio and text prompts, assist rescuers in noisy environments where audio prompts may be difficult to follow.

**Designed to be Rugged**

The rubberized edges provide the AED with a drop rating of 1.2 meters, making it a durable choice for the U.S. Coast Guard.

**Suitable for Use at Sea**

- Constructed of robust and long-lasting materials for use in most environments.
- Boasting an IP55 rating to protect against spray and water.

**Quick Maintenance Check**

The One-Touch Status Screen simplifies the status check of the AED and its components, reducing cumbersome tasks for the crew.

Defibtech AEDs are deployed on inland waterway, coastal, and blue water commercial vessels. Cost-effective, water resistant, easy for non-professionals to operate, and suitable for use in high vibration settings, Defibtech’s AEDs are the ideal solution for treating cardiac arrest away from port.

Now there is something you can do to improve the odds dramatically for your passengers and crew members with a solution that is easy to use and inexpensive to buy.

Rx ONLY

This product has CE mark approval. When storing an AED on a boat, consult its User Manual for storage requirements.
